

Quality Day 2008 Proves Informative Event for Indian Customers and Experts

EMG Automation GmbH, Vatron, MESAcon Messelektronik GmbH, LDV System and Cognex Corporation jointly organised the 'Quality Day 2008' on 29th November in Jamshedpur. The seminar provided a platform to Indian customers to meet and interact directly with the foreign companies as well as to exchange their experiences with experts of other Indian steel producing companies.

The Quality Day agenda consisted of a seminar program where each company presented its vision as well as its latest technologies. Subsequent to these presentations, all participants had the chance to discuss their needs and clarify technical details with each participant.

Commenting on the event Mr. Ashutosh Charan, General Manager, Operations of Tata BlueScope Steel said, "An event like the Quality Day is very interesting for us to get to know the systems, further technical developments as well as the customer advantages which are offered by the organizing companies. Therefore we would approve a repetition of such an event in the next years."

Quality and line management professionals inclusive of top decision makers along with experts of big Indian steel producing companies like Tata Steel Ltd., Tata BlueScope Steel Ltd., Tata Ryerson Ltd. and The Tinsplate Company of India Ltd. participated in this event.

Besides the Quality Day in Jamshedpur, the same event had been planned for Mumbai as well, but unfortunately, due to the terrible terror attacks that started on November 26th, 2008, one night before the event should take place, and the event got cancelled. Due to the huge number of registrations in advance and the positive feedback of the event in Jamshedpur, the Quality Day in Mumbai will be hosted next year.

Spareage Seals - A Utilitarian Solution for Steel Mills

Spareage Seals Ltd is a leading manufacturing company of Hydraulic seals, Pneumatic seals, Rotary seals, and 'O' Rings. The company produces seals, which are used original equipment and replacement applications in a slew of industries ranging from steel plants to nuclear & thermal power plants cement plants, hydraulic and pneumatic cylinders, gear box and motor manufactures. Spareage also manufactures piston seals, rod seals, wiper, wear and bonded

seals, standard seals, fabric seals heavy duty seals, V-rings & O-rings too are made by the company.

In fact, The company provides total sealing solutions for the existing assemblies by designing special sealing profiles suitable to the existing grooves with minimum modifications in the parts. The recommended sealing profiles are specially made according to the application parameters to overcome the failure. Split seals are used to reduce downtime in replacing seals especially during shut down time, without removing heavy couplings or parts. These are for use in applications such as bearings mounted on shafts, gear box couplings and fly wheels of heavy equipment in various industries. Spareage can provide specially moulded split seals which should be used with a retainer plate.
