

HAZEMAG & EPR GmbH forms Indian subsidiary

The Dulmen, Germany-based mining and mineral processing equipment major HAZEMAG & EPR GmbH has decided to have a stronger presence in Indian market and formed an Indian subsidiary, HAZEMAG INDIA Pvt. Ltd. The new entity has come into operation since April 1, 2010 and would be based at Kolkata. Sabyasachi Mishra, Director in the new entity would head the Indian office and Klaus Beer, Managing Director of HAZEMAG & EPR GmbH would be the Chairman.

HAZEMAG India would be mainly focusing on complete MinPro® range of horizontal crushing equipments like Feeder Breakers, Impact Roll Crushers, Roll Crushers etc. These are of fixed, semi-mobile and mobile design for applications like coal, limestone, coke, Potash etc. The various functions like marketing, engineering, project management, after-sales-service would be handled

by this new entity whereas the manufacturing would be exclusively done at Hari Machines workshop at Rajgangpur, Orissa.

These primary crushers implement horizontal material flow technology which breaks the large lumpy feed material down to size suitable for belt conveying and further processing. In contrast to conventional crushers with vertical flow, the horizontal crushers offer the benefit of compact and light design combined with high through-put and reversible linear material flow. This means that the machines can be easily relocated and do not require concrete foundation. Horizontal flow also reduces energy requirement and allows larger feed size. Horizontal crushers can also be fed at gradient, hence no costly conventional ramp is required for application that does not have a feed hopper.

HAZEMAG & EPR GmbH is a medium-sized, internationally operating

mechanical engineering company with headquarters in Dülmen/North Rhine Westphalia, Germany. As one of the pioneers in its field, HAZEMAG is a leading plant and equipment manufacturer for the raw materials processing, mining and drilling industries. The company has an extensive net of licensees and agents in more than 40 countries to provide guaranteed customer back-up and support world-wide. HAZEMAG has a staff of some 400 employees in Germany and abroad.

HAZEMAG GmbH had signed licensee agreement with Hari Machines in 2004 for manufacturing and marketing of MinPro® range of equipments and since then about 20 numbers of such horizontal primary crushers are in successful operation in India for coal crushing. HAZEMAG GmbH has several installations worldwide for coal, limestone and potash applications.
